                                                                                                                                                                                                          parathormone related peptides (hPTRR). The antibodies comprise chimeric L and/or H chains, where the C region is of human and L region of mouse, origin. The present sequence represents a specifically claimed region of an antibody of the invention. Host cells, transformed with vectors containing DNA encoding antibodies of the invention, can be used to produce the antibodies. The antibodies may be used to treat hypercalcaemia, especially that due to a malignancy, e.g. cancers of pancreas, lung, throat, larynx, tongue, gum, oesophagus, stomach, liver, breast, kidney, bladder, womb or prostate or malignant lymphoma. They may also be used for treatment of hypophosphaemia such as that due to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an agent (I) for ameliorating low vasopressin levels, and symptoms caused by this depression, containing as an active component a substance which inhibits the binding of parathyroid hormone related peptide (PTHTP) to its receptor. (I) has antidiarnheic, antiemetic, antidiabetic and antipyretic activities. (I) can be used for the amelioration of symptoms caused by decrease in vasopressin levels, such as that due to cancer are treated using the agent. These symptoms include dehydration, excessive urination, thirst, vomiting, diarrhoea, fever, perspiration and diabetes. ARF69085 to

The present invention describes an agent (I) for the treatment and prevention of diseases other than hypercalcaemia associated with parabhyoid hormone (PTH) or parathyoid hormone related peptide (PTHP).

[I) contains as an active component a substance which promotes or inhibits the binding of ligands to PTH receptor or PTHrP receptor, or is an agonist to an agonist to these receptors. (I) have analgesic, immunosuppressive, nootropic, neuroprotective, antiinflammatory, cytostatic, antithyroid, eating-disorders and cardiovascular activities.

[I) is used for treatment and prevention of disorders associated with PTH or part.Pr., including: pain; immune suppression; disturbances of the disestive system, protein metabolism, sugar metabolism, lipid metabolism, appetite, blood chemistry, thyroid function, and electrolyte balance; central nervous system disorders such as sleep disturbance; neurological disturbances, brain function disturbance, brain circulation disturbance and autonomic nervous system disturbance, brain circulation disturbance and autonomic activities cascade including blood poisoning, dropsy, prince the present of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  parathyroid hormone related peptide; analgesic; immunosuppressive; nootropic; neuroprotective; antiinflammatory; cytostatic; antithyroid; eating-disorder; cardiovascular; pain; immune suppression; appetite; digestive system; protein metabolism; sugar metabolism; lipid metabolism; blood chemistry; thyroid function; electrolyte balance; neurological; central nervous system disorder; sleep disturbance; brain function; brain circulation; autonomic nervous system; blood poisoning; dropsy; inflammation; blood disease; calcium disturbance; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammation, blood disease, calcium disturbance and autoimmune disease. Treatment and prevention of disorders other than hypercalcaemia which are associated with PTH or PTHrP, especially those associated with malignant tumours, and thereby ameliorating the quality of life of these patients.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     parathyroid hormone related peptide; gastrointestinal; cancer; central nervous system; calcium-antagonist; bone resorption inhibitor; bisphosphonate; calcitonin; calcium elimination promoter; intestinal calcium absorption inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an agent (I) for the treatment of drug-resistant hyperglycaemia. (I) contains as an active component a substance which inhibits the binding of parathyroid hormone related peptide (PPHPP) to its receptor. (I) is a calcium-antagonist. (I) can be used for treatment of drug-resistant hyperglycaemia e.g. associated with cancer. The hyperglycaemia is resistant to treatment with other drugs including bone resorption inhibitors (such as bisphosphonate or calcitonin), calcium elimination promoters and intestinal calcium absorption inhibitors. AAR69197 to AAR69252 and AAB76917 to AAB76935 represent sequences used in the exemplification of the present

                                                                                                                                                        This sequence encodes the vitaxin antibody variable light chain region. Vitaxin and the antibody LM609 bind selectively to integrin alphavbeta3 bid can be used to inhibit binding of alphavbeta3 to a ligand and thus block integrin—mediated signal transduction. This is useful in the treatment, prevention and diagnosis of alphavbeta3-mediated disease, specifically angiogenesis and restenosis (but also e.g. (non-)immune inflammation, diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid arthritis, macular degeneration, osteoporosis etc.). The antibodies contain non-murine framework regions so are suitable for use in humans. Enhanced types of LM609 have affinity more than 90 times greater than that of parent the parent antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GGTCAAGCCCCAAGGCTTCTCATCAAGTATCGTTCCCAGTCCATCTCTGGGATCCCCGCC 180

Enhanced LM609 grafted antibodies exhibiting selective binding affinity to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of anglogenesis, inflammatory diseases e.g. psoriasis, cancers and osteoporosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 CTTTCCTGCCAGCCAGCCAAAGTATTAGCAACCACCTACACTGGTATCAACAAAGGCCT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 GAGATTGTGCTAACTCAGTCTCCAGCCACCCTGTCTCTCAGCCCAGGAGAAAGGGCGACT 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to enhanced LM609 grafted antibodies exhibiting selective binding affinity to alphaNpeta_3 integrin or their functional fragments. The antibodies or their functional fragments can be used in the diagnosis and treatment of antibodies. The antibodies or their functional alphaNpeta_3-mediated diseases such as angiogenesis, inflammatory diseases (such as psorlasis and chronic articular rheumatism), disorders associated with inappropriate or inopportune invasion of vessels (such as diabetic retinopathy, neovascular glaucoma and cancer disorders such as tumours and Kaposi's sarcoma), retinal diseases (such as macular degeneration), restenosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GGTCAAGCCCCAAGGCTTCTCATCAAGTATCGTTCCCAGTCCATCTGGGGATCCCCGCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        181 aggttcagtggcagtggatcagggacagatttcaccctcactatctccagtctggagcct

```
This sequence encodes a LM609 grafted antibody variable light chain region. LM609 and the antibody vitaxin bind selectively to integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3 to a ligand and thus block integrin-mediated signal transduction. This is useful in the treatment, prevention and diagnosis of alphavbeta3-mediated disease, specifically angiogenesis and restenosis (but also e.g. (non-)immune inflammation, diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid arthritis, mediated degeneration, osteoporosis etc.). The antibodies contain non-murine framework regions so are suitable for use in humans. Enhanced types of LM609 have affinity more

LM609 and the antibody vitaxin bind selectively to integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3 to a ligand and thus block integrin-mediated signal transduction. This is useful in the treatment, prevention and diagnosis of alphavbeta3-mediated disease, specifically anglogenesis and restenosis (but also e.g. (non )immune inflammation, diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid arthritis, macular degeneration, osteoporosis etc.). The antibodies contain non-murine framework regions so are suitable for use in humans. Enhanced types of LM609 have affinity more than 90 times greater than that of parent the parent antibody.
                                                                                                                                                                                                                                                                                                                                                                                                        "LM609 antibody light chain variable region" artial sequence, no start or stop codon given"
                                                                 Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
integrin - and related grafted antibodies based on murine monoclonal
LM609, also related nucleic acid, used to treat, prevent or diagnose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to enhanced LM609 grafted antibodies exhibiting selective binding affinity to alphaVbeta_3 integrin or their functional fragments. The antibodies or their functional fragments can be used in the diagnosis and treatment of alphaVbeta_3-mediated diseases such as angiogenesis, inflammatory

This DNA sequence codes for a humanised light chain variable region (see AAY33407) of murine monoclonal antibody VTm1-1 (MuVTm1-1), an antibody that specifically binds to the B subunit of verotoxin II (C VT2). The invention relates to humanised antibodies against VT2 that are capable of neutralizing VT2 and/or VT2 variants. The humanised antibody is a humanized form of MuVTm1-1 comprising the cc complementarity determining regions of MuVTm1-1 (see AAY32404-05) and theavy and light chain variable region frameworks from the human GF4 antibody heavy and light chain frameworks, provided that at least 1 copsition selected from L49, H29, H30, H49 and H98 is occupied by the minor acid at the equivalent position of the MuVTm1-1 antibody heavy or light chain variable region framework. Such humanized antibodies have an affinity for VT2 that is 3-, 5 or 10-times that of MuVTm1-1. They are used for treating a patient suffering from, or at risk of, the toxic effects from VT2 (claimed), especially for treating coli (VTEC) infection, and haemolytic uraemic syndrome (HUS).
                                                                                                                                                              used for treating Verotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 gaaattgtgctaactcagtctccagccacctgtctgtgtctccaggagaaagagccact 120

This DNA sequence codes for the light chain variable region (VL, see AAW84098) of humanised anti-alpha-v beta-3 vitronectin receptor monoclonal antibody D12HZHC 1-0. It is based on the VL sequence (see AAW84096) of human Kabat subgroup III kappa chain, with complementarity determining regions from the murine anti-human alpha-v beta-3 vitronectin receptor monoclonal antibody D12 (see AAW84094).

The synthetic VL humanised vit DNA sequence is also provided in the synthetic VL humanised will DNA sequence is also provided for passive immunotherapy of a disorder mediated by the alpha-v beta-3 receptor, e.g. cardiovascular disorders or angiogenic related disorders, such as angiogenesis associated with diabetic retinopathy, atherosclerosis and restenoiss, chronic inflammatory disorders, macular degeneration, rheumatoid arthritis and cancer, e.g. solid tumour metastasis, and diseases where bone resorption is associated with pathology such as osteoporosis, hyperparathyroidism, paget's disease, hypercalcemia of malignancy, osteolytic lesions produced by bone metastasis, bone loss due to immobilisation or sex homene deficiency. They can also be used for targeted drug

    used for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibody (MAD) D12 light chain variable region (VL, see AAW85000) that is altered in humanised D12 VL (see also AAW84098), including the first 5 amino acids of the human kappa constant region. It was prepared from 4 overlapping synthetic oligonuclectides (see AAV71816-19). The synthetic gene was used to construct an expressio vector for humanised D12 VL, D12 is an anti-alpha-v beta-3 vitronectin receptor MAD. Humanised D12 MADs can be used for passive immunotherapy of disorders mediated by the alpha-v beta-3 vitronectin receptor, e.g. restenosis and angiogenic associated
                                                                                                                                                                                                                                                                                                           Humanised antibody; monoclonal antibody; MAb; antibody engineering;
